

Brewing The Finest Beverage

Premium Coffee Water Filter

It's pretty simple: Brewing coffee or tea with tap water will affect the taste of your finished product. It's akin to cooking with wine. Any chef worth his palate will refuse to cook with low-quality wine that would not be enjoyed by the glass.

Similarly, some of us don't drink tap water, so why in the world would we brew our coffees and teas with it? At Standard Coffee, we use premium filtered water to brew our beverages.

We've lead the way in water filtration for pure drinking water with our Standguard water filters. Today, we lend our expertise to the brewed beverage arena with our SG-2S brewer filter.

This new filter provides premium water by reducing and/or removing chlorine, organic tastes and odors, and sediment.

Eliminating these unwanted elements from tap water contributes to brewing the highest quality beverage possible.

Specially Designed For Premium Coffee:

- Effectively filters dirt, particles and cloudiness.
- Reduces Chlorine tastes and odor.
- Removes moldy and earthy tastes, which affects the tastes of coffee.
- Reduces limescale build-up.
- Protects water-using equipment.
- Produces perfect water for premium coffee brewer applications.
- No maintenance required.

With the SG-2S Brewer Filter our customers are not just buying a water filtration unit. This filter helps ensure quality brewing assurance for the best cup of coffee or tea.

We match the SG-2S with a fantastic maintenance programs, and easy-to-follow temperature control and brew-cycle directions.
